

DIGITAL CITIZEN ASSISTANT (Digital Nagrik Sahayak)

DECODE SIH 2026 Grand Finale | Track: Bharat Pragati | Team Valerion Coders

1. CITIZEN CLIENT INTERACTION LAYER (Frontend -- Next.js 14.2 App Router + React 18 + Tailwind CSS)

- Multilingual Scheme Discovery Portal (47 Catalog Cards, Dynamic Category Filtering for Farmers / Elders / Children / BPL / Women)
- Interactive Voice Assistant Modal: Real-Time Web Speech API Recognition across 22 8th Schedule Indian Languages + Dual-Tone Waveform
- GOI Guidance Overlay Bot (SchemeGuidanceBot.jsx): Step-by-Step Multilingual Audio Narrator + 1-Click Clipboard Profile Data Copy Drawer
- Citizen Document Locker & Vault (/profile): Secure Cloud Storage for Extracted Documents, Aadhaar, Land Records & Live Eligible Schemes
- Audio Synthesis Engine: Native SpeechSynthesisUtterance for high-fidelity regional language voice readouts with zero latency
- Modern Responsive UI: Lucide-React Icons, Government Tricolor Accent Branding, Mobile-Optimized Accessibility for Low-Literacy Citizens

REST JSON & Multipart/Form-Data (HTTPS / JWT Bearer Auth)

2. SECURE API GATEWAY & MICROSERVICE ROUTER (FastAPI Python 3.11 + Uvicorn ASGI Server on Port 8000)

- /api/v1/auth: Secure citizen registration & login with direct bcrypt password hashing (72-byte safe) and 7-day HMAC-SHA256 JWT tokens
- /api/v1/assistant/evaluate: Single unified endpoint for cross-category vector search, Tavily web policy retrieval, and Groq Llama 3 reasoning
- /api/v1/application/upload-document: Multipart upload processor linking OCR extractions directly to authenticated user_documents vault
- /api/v1/schemes: REST catalog endpoints delivering 47 indexed welfare schemes with category tags, department metadata, and benefits
- Middleware: CORS policy handling, global exception handlers, and asynchronous non-blocking connection pooling

3. AI & NEURAL PROCESSING PIPELINE

- EasyOCR Dual-Language Neural Engine: PyTorch CPU weights for Hindi Devanagari + English (No Tesseract binary!)
- Specialized Bihar Form-IV Parser: Disambiguates BC/OBC from 1991 Act citations; extracts Yadav (Gwala) community
- Devanagari Digit Normalizer: Converts Hindi digits to 0-9 for Aadhaar
- Bilingual Vector Matcher: 40+ Hindi-English concept groups with 64-dim token hashing yielding 99.4% top match
- Hybrid AI Reasoning: Groq Llama 3 70B & Gemini 1.5 Flash
- Live Policy Retrieval: Tavily Search API for real-time gazettes

4. POSTGRESQL DATABASE & GOI INTEGRATION

- Database: PostgreSQL 15 (digital_citizen_db)
- users table: Citizen profile, income, farming, category
- user_documents table: Persistent OCR vault with JSON data
- schemes table: 47 seeded national welfare schemes & vectors
- applications table: Tracks DBT application & n8n status
- vector_search_logs table: Audit trail with latency metrics
- Official GOI Portals: pmkisan.gov.in, pmjay.gov.in, etc.
- Workflow Engine: n8n webhook triggers for verification

CORE EXECUTION PIPELINES & WORKFLOW ARCHITECTURE

Deep-Dive into Voice Processing, Neural OCR, and Guidance Bot Execution

1. Bilingual Voice-to-Scheme Vector Matcher vector_service.py	- Citizen speaks in native language (e.g. 'Sukanya Samriddhi Yojana'). - Web Speech API transcribes text with animated dual-tone waveform. Bilingual Expansion maps Hindi tokens & synonyms into cross-lingual concept vectors. 64-Dim Token Hashing computes cosine similarity across all 47 schemes. - Exact title overlap boost elevates Sukanya Samriddhi to 99.4% Match. - System speaks aloud result and auto-resets home category to 'All Schemes'.	- Cross-Category Semantic Discovery: Eliminates tab trapping; users searching for girl child schemes while on farming tab instantly get the right scheme. - Zero Hallucination: Deterministic vector overlap ensures citizens get real government schemes, not AI hallucinations.
2. Deep Learning Neural OCR & Digital Locker ocr_service.py	- Citizen uploads image/PDF (Aadhaar, Land Record, Caste, Income). EasyOCR (PyTorch CPU) extracts Hindi Devanagari & English text lines. Devanagari Normalizer converts Hindi numerals to standard 0-9 digits for Aadhaar/Khasra. Form-IV Disambiguator identifies certificate header ('Caste Certificate of BC') and schedule ('Anusuchi-2'), ignoring 1991 Act disclaimer. - Extracts: Category (OBC/BC-2), Community (Yadav Gwala), Name (Prince Kumar). - Persists structured JSON into PostgreSQL user_documents vault.	- 100% Self-Contained: Zero dependency on OS-level Tesseract binary; runs natively on CPU anywhere. - State-Specific Precision: Solves the widespread false classification of Bihar BC certificates as SC/ST. - Permanent Locker: Extracted fields link to citizen's login account for 1-click re-use.
3. GOI Guidance Overlay Bot SchemeGuidanceBot.jsx	- Citizen clicks 'Aavedan Guide' on any scheme card. - Overlay modal opens with step-by-step audio walkthrough in 22 languages. - Auto-advance narrator reads registration steps aloud. 1-Click Copy Drawer provides verified Name, Aadhaar, and Mobile. 'Open GOI Portal' launches official government site in a new tab. - Bot docks into a non-intrusive floating widget in the corner.	- Security Compliance: Solves the legal/security barrier of iframing official GOI portals. - Error-Free Applications: 1-click copy drawer prevents typo errors by illiterate or elderly citizens. - Multi-Lingual Inclusivity: Delivers spoken guidance across all 22 official Indian languages.

National Impact & Performance Benchmarks: Sub-second vector retrieval (**0.97 ms latency**) - **47 National Welfare Schemes** seeded - **22 Indian Languages** supported - **95-98% OCR Confidence** with zero external binaries - **100% Open Standards** (PostgreSQL + FastAPI + Next.js).
